

Sample Project Documentation

Date: 30 September 2026

Team ID: SWTID-2026-4040

Project Name: ComicCraft — AI Comic Story Creator Using Gemini Models

Team Leader: Bala Esakki R

Team Members: Sandhiya D, Rithikaa B, Anitha R, Anbuselvi

Team Size: 5

Maximum Marks: 5

Abstract

ComicCraft is an AI-powered comic story creator that combines Gemini-based text generation with Stable Diffusion image generation. The user submits a story idea and creative parameters through a browser form. Gemini Flash creates a five-panel outline, Gemini Pro expands the narrative, Stable Diffusion creates panel images, and a layout builder prepares data for the preview/export flow.

Objectives

- Generate a structured comic outline from a user idea.
- Expand the outline into narration and dialogue.
- Generate visual panel artwork from image prompts.
- Present the generated comic through a browser interface.
- Provide a foundation for PDF/export and future persistence.

Conclusion

The supplied implementation demonstrates a clear Generative AI workflow and modular architecture. The main remaining integration item is to reconcile the source package/import structure and implement or include the exporter referenced by the route before treating the project as fully end-to-end executable.
