

Scalability & Future Plan

Date: 30 September 2026

Team ID: SWTID-2026-4040

Project Name: ComicCraft — AI Comic Story Creator Using Gemini Models

Team Leader: Bala Esakki R

Team Members: Sandhiya D, Rithikaa B, Anitha R, Anbuselvi

Team Size: 5

Maximum Marks: 5

Area	Current State	Future Enhancement
Panel Count	Five-panel outline	User-selectable panels/pages
Image Generation	Local Stable Diffusion pipeline	Hosted/optimized image service or GPU deployment
Persistence	No database in supplied source	User accounts, saved stories and history
Export	Export route/page referenced; exporter missing	Verified PDF, PNG, comic-script and archive exports
Character Consistency	Prompt-driven	Structured character profiles / state store
Collaboration	Not included	Shared editing and version history
Deployment	Local FastAPI-oriented project	Containerized cloud deployment with monitoring
Observability	Not included	Logging, metrics, tracing and model/API usage tracking

Scalability priority should be driven by deployment needs: externalize compute-heavy image generation, add job queues for long-running requests, and introduce persistent storage when multi-user usage is required.
