

Code Layout, Readability and Reusability

Date: 30 September 2026

Team ID: SWTID-2026-4040

Project Name: ComicCraft — AI Comic Story Creator Using Gemini Models

Team Leader: Bala Esakki R

Team Members: Sandhiya D, Rithikaa B, Anitha R, Anbuselvi

Team Size: 5

Maximum Marks: 5

File / Module	Responsibility
03_main.py	Creates FastAPI app, mounts static files/templates and includes router/CORS.
04_routes.py	Defines home, generation and export-success routes; orchestrates services.
05_gemini_flash.py	Calls Gemini 1.5 Flash to create a five-panel outline and image prompts.
06_gemini_pro.py	Calls Gemini 1.5 Pro to expand the outline into story text.
07_image_generator.py	Loads Stable Diffusion v1-5 and generates/saves panel images.
08_layout_builder.py	Builds a list of panel dictionaries combining outline, story and images.
09_requirements.txt	Lists runtime dependencies.
10_index.html	Collects story prompt and creative controls.
11_comic_preview.html	Loops over layout and displays panel image/description/story.
12_export_success.html	Shows export-success page and link back to creation.

Readability / Reusability Notes

- AI providers are separated into dedicated modules.
- The route layer coordinates services instead of embedding all model code in one file.
- The layout builder returns structured dictionaries that can be reused by presentation/export layers.
- Potential improvement: centralize configuration, add input validation, replace wildcard CORS, and introduce explicit service interfaces/tests.
