

Solution Architecture

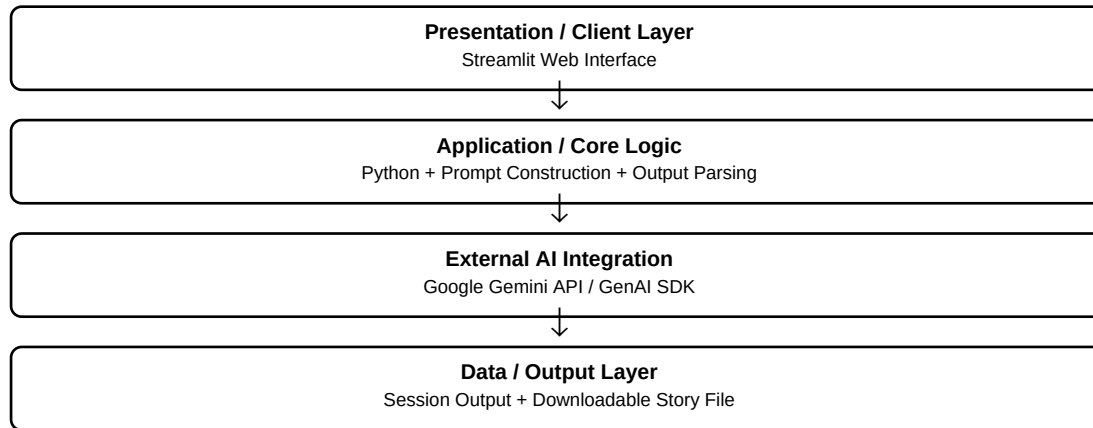

Date: 30 September 2026 | Team ID: Not provided | Team Size: 5

Project Name: ComicCraft – AI Comic Story Creator Using Gemini Models

Team Leader: Bala Esakki R

Team Members: Sandhiya, Anitha, Anbuselvi, Rithikaa

The architecture is intentionally lightweight and single-service. The documented implementation uses a Streamlit presentation layer, Python application logic, Gemini as the external AI service, and downloadable/session output rather than a persistent database.

Component	Description / Role	Technology
Presentation Layer	Accepts the story idea and displays structured panels.	Streamlit
Application Logic	Builds prompts, calls the model, parses output and renders results.	Python
External AI Integration	Generates narrative content from the structured prompt.	Google Gemini / GenAI SDK
Data / Output	Holds current generated result and supports file download.	Streamlit session / text file
