

Code Layout, Readability and Reusability

Date: 30 September 2026 | Team ID: Not provided | Team Size: 5

Project Name: ComicCraft – AI Comic Story Creator Using Gemini Models

Team Leader: Bala Esakki R

Team Members: Sandhiya, Anitha, Anbuselvi, Rithikaa

Documented design: The project report describes a compact Streamlit application centered on a single application file, dependency manifest and environment configuration. The supplied ZIP, however, contains a different FastAPI-oriented prototype layout.

Observed / Documented Component	Responsibility	Readability / Reuse Consideration
comic_app.py (documented report)	UI, prompt construction, Gemini call, parsing and rendering.	Simple for a student prototype; can later split into modules.
requirements.txt	Python dependency declaration.	Reproducible installation.
.env	Stores GEMINI_API_KEY.	Keeps secrets out of source control.
05_gemini_flash.py (supplied ZIP)	Generates a five-panel outline using Gemini 1.5 Flash.	Separates model-specific logic.
06_gemini_pro.py (supplied ZIP)	Expands outline into narration/dialogue.	Separate generation responsibility.
07_image_generator.py (supplied ZIP)	Attempts image generation with Diffusers/Stable Diffusion.	Potentially reusable but not aligned with the report's current text-only scope.
08_layout_builder.py (supplied ZIP)	Builds panel layout data.	Separates presentation data assembly.
04_routes.py / 03_main.py (supplied ZIP)	FastAPI routing/application setup.	Modular, but imports additional files absent from the supplied ZIP.

Recommendation for final submission: choose one implementation path (the documented Streamlit version or the supplied FastAPI prototype), update the README/requirements/source tree consistently, and test the exact ZIP that will be submitted.
