Project Name: ComicCraft – AI Comic Story Creator Using Gemini Models

Team Leader: Bala Esakki R

Team Members: Sandhiya, Anitha, Anbuselvi, Rithikaa

Core solution logic

- Collect a story idea from the user.
- Construct a prompt requesting a five-panel comic with explicit scene, action, dialogue and image-prompt sections.
- Send the prompt to Gemini through the Google GenAI SDK.
- Parse the response into five structured panels.
- Display the panels in a readable interface.
- Provide a download option for the generated story.
- Use prompt instructions to preserve character identity, appearance and personality across panels.

Illustrative pseudocode

```
load_dotenv()  
client = GeminiClient(api_key=GEMINI_API_KEY)  
idea = get_user_story_idea()  
prompt = build_five_panel_prompt(idea)  
response = client.generate_content(model, prompt)  
panels = parse_into_five_panels(response.text)  
render_panels(panels)  
offer_download(format_story(panels))
```

Security: API credentials are intended to be supplied through environment configuration. Never commit the real key to the repository.
