

Performance Testing

Date: 30 September 2026 | | Team ID: Not provided | Team Size: 5

Project Name: ComicCraft – AI Comic Story Creator Using Gemini Models
Team Leader: Bala Esakki R
Team Members: Sandhiya, Anitha, Anbuselvi, Rithikaa

Because ComicCraft depends on a remote generative AI API, response time is influenced by prompt size, model latency, network conditions and service availability. The project report emphasizes functional and qualitative output testing rather than benchmark-style latency testing.

Test Area	Method	Expected Result	Result in Report
Input handling	Submit valid and empty ideas.	Valid input proceeds; empty input is rejected.	Pass
Generation	Submit a normal story idea.	Five panels are generated.	Pass
Output parsing	Use varied story ideas and formatting variations.	Output separates into five panel sections.	Pass
Character consistency	Review names/traits across five panels.	Character identity remains consistent.	Pass
Error handling	Missing/invalid API key, network issue, short input.	Informative error rather than unhandled crash.	Pass
Download	Generate story and use download action.	Complete story is saved.	Pass
Long input	Submit long/complex idea.	Application handles input without crashing.	Pass

Suggested quantitative metric for future evaluation: measure median and 95th-percentile generation latency over a fixed set of prompts under a stable network/API configuration. No such benchmark was provided in the supplied report, so no latency value is invented here.
