

Project Executable Files

Date: 30 September 2026 | Team ID: Not provided |
Team Size: 5

Project Name: ComicCraft – AI Comic Story Creator Using Gemini Models
Team Leader: Bala Esakki R
Team Members: Sandhiya, Anitha, Anbuselvi, Rithikaa

This submission package includes the original ComicCraft source archive contents under **Project Source Code**, together with the original project report. The source should be reviewed against the documentation before execution.

S.No	Submission Item	Included	Notes
1	Complete source code	Yes	Original supplied ZIP contents copied into Project Source Code.
2	README / setup guide	Yes	Original README retained; this package also includes this phase document.
3	Dependency file	Yes	Original requirements file retained.
4	Database schema	N/A	Current documented scope has no persistent database.
5	Environment example	Partial	Report documents GEMINI_API_KEY; do not include a real key.
6	Hosted URL	Not provided	No deployed URL was supplied.
7	APK / binary	N/A	Web/Python project.
8	Dockerfile	Not provided	Not present in supplied ZIP.
9	Tests / results	Documented	Testing results are described in the project report and phase PDF.
10	Demo video	Not provided	No video link was supplied.

Source-tree verification issue: the supplied ZIP includes files such as 03_main.py and 04_routes.py that import an *app* package and an *exporters* module that are not present in the archive. It also contains a Diffusers image generator, while the supplied report documents a Streamlit text-only implementation. This package therefore preserves the source as received rather than falsely declaring it fully executable.

Run instructions from the supplied report: create a virtual environment, install requirements, set GEMINI_API_KEY, then run the documented Streamlit command. The exact command should be reconciled with the actual source before final evaluation.
