

Scalability & Future Plan

Date: 30 September 2026 | Team ID: Not provided | Team Size: 5

Project Name: ComicCraft – AI Comic Story Creator Using Gemini Models
Team Leader: Bala Esakki R
Team Members: Sandhiya, Anitha, Anbuselvi, Rithikaa

Future Area	Planned Enhancement	Benefit
Image Generation	Integrate an image-generation model using the generated image prompts.	Move from script to visual comic output.
Variable Panels	Allow users to select panel/page count.	Support longer stories.
Persistence	Add user accounts and a database for story history.	Save and revisit creations.
Export	Add PDF and formatted comic-script exports.	Improve sharing and publishing.
Customization	Allow genre, tone and art-style controls.	More personalized generation.
Collaboration	Support shared editing and refinement.	Team-based creative workflows.
Cloud Deployment	Deploy to a managed platform / Streamlit hosting.	Public access and easier demonstration.

Scalability path: start with the single-service application, then separate UI, generation service, storage and background image-generation workloads only when usage requires it. Add caching, rate limiting, observability and authentication as the user base grows.
